## **Blinatumomab Troubleshooting**

Yes

Disconnection/leak in tubing or blinatumomab bag

All troubleshooting algorithms for the administration of blinatumomab can be found on the APPHON website at:

www.apphon-rohppa.com/en/blina

If APHON trained or adult chemotherapy trained RNs are not available for any period of time, the patient must remain within 1 hour of the IWK.

Two APHON

trained RNs

Disconnect the line and bag from the patient and heplock CVAD, mark the time infusion was stopped.

Swab the line if pus present.

Contact pharmacy to obtain backup bag.

Backup bag verified by two APHON trained RNs and infusion resumed.

Document interruption time if greater than 60min.

available?

Contact adult chemotherapy trained
RN to disconnect and stop infusion

Heplock the CVAD.

by calling the Oncology inpatient unit at 5201.

No

Send the patient to the peds oncology clinic as soon as possible the following day for a new infusion bag.

If peds oncology clinic does not open on the following day, contact the IWK pediatric oncologist on call to make arrangements for patient to go to the IWK to have the infusion resumed.

Send the backup bag of blinatumomab with the patient to IWK.
